Liquidity Ratios Disclosures - 30 June 2026

In August 2018, the Central Bank of Bahrain issued the regulations on the implementation of the Net Stable Funding Ratio (NSFR) in the Liquidity Module to be applied to banks operating in Bahrain effective from 31 December 2019. The objective of the Net Stable Funding Ratio (NSFR) is to promote the resilience of bank's liquidity risk profiles and to incentivize a more resilient banking sector over a longer time horizon. The NSFR will require banks to maintain a stable funding profile in relation to the composition of their assets and off-balance sheet activities. A sustainable funding structure is intended to reduce the likelihood that disruptions to a bank's regular sources of funding will erode its liquidity position in a way that would increase the risk of its failure and potentially lead to broader systemic stress. The NSFR limits over-reliance on short-term wholesale funding, encourages better assessment of funding risk across all on-balance sheet and off-balance sheet items, and promotes funding stability. As per CBB Disclosure requirements, consolidated NSFR is to be published on a quarterly basis.

NSFR is defined as the amount of available stable funding relative to the amount of required stable funding. This ratio must be equal to at least 100 percent.

'Available Stable Funding' is defined as the portion of capital and liabilities expected to be reliable which is determined by various factor weights according to the nature and maturity of liabilities with liabilities having maturity of 1 year or more receiving 100% weight. 'Required Stable Funding' is defined as the portion of on balance sheet and off balance sheet exposures which requires to be funded on an ongoing basis. The amount of such stable funding required is a function of the liquidity characteristics and residual maturities of the various assets held.

KFH maintained comfortable stable funding buffers on 30 June 2026. Available Stable Funding at KFHBahrain was USD 17.6 billion against USD 15.5 billion of Required Stable Funding, resulting in a consolidated NSFR of 113.9%. NSFR as on 31 March 2026 was 113.9%.

The main drivers behind the Available Stable Funding are the adequate capital base, sizeable retail deposit base, and funding from non-financial companies and long term funding from institutional clients. The capital base formed around 31.3%, retail deposits (including deposits from small-sized business customers) formed 26.7%, and wholesale funding formed 39.6% of the total Available Stable Funding, after applying the relevant weights.

The Required Stable Funding primarily comprised lending to corporates, retail clients and financial institutions. The stock of High-Quality Liquid Assets (HQLA), which includes cash and reserve balances with the CBB and other central banks, government sukuk issuances in domestic and foreign currencies as well as sukuk issuances by highly-rated companies was USD 10.2 billion. Due to their high quality and liquid characteristic, these assets require no or low amount of stable funding. Accordingly, the HQLA constituted only 14.7% of the Required Stable Funding after applying the relevant weights. Performing financing to both non-financial and financial institutions constituted 60.5% of the total RSF after applying the relevant weights while Non-HQLA investments contributed 7.7% of the total RSF. Other assets and Contingent funding obligations, such as committed credit facilities, guarantees and letters of credit (LCs) constituted the remaining 17.5% of the Required Stable Funding.

The NSFR is supplemented by Liquidity Coverage Ratio (LCR) which measures the Bank's availability of HQLA to support short term liquidity stress situation as defined in the CBB rules. As of 30 June 2026, the Bank's consolidated LCR was 173.24% against a minimum limit of 100%.

Quantitative information on Net stable Funding Ratio is provided in the table below.
